

# DX OSE — 34-Clause Merge Report v1

*Separate merge evidence for DX\_OSE\_CONSTITUTION\_v2.1\_MERGED*

**Classification rules:** موجود مسبقاً = already governed in the source/approved governance set; اضافة = inserted into the merged document; تعارض اتحل = conflict resolved using the approved recommendation.

| #  | Merge status                      | Decision / evidence                                                                                                                                               |
|----|-----------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1  | 4.5.1§ — اضافة                    | ADMIN retirement.                                                                                                                                                 |
| 2  | 4.5.2§ — تعارض اتحل               | “Full ACC” means full operational grants excluding period-close/reopen, platform-only, currency configuration and Master Data mutation.                           |
| 3  | موجود مسبقاً                      | ORG_MANAGER is recognized in approved access/period governance; no contradictory role removal exists.                                                             |
| 4  | 11.9§ — اضافة                     | Display-currency mutation reserved to SUPER ADMIN.                                                                                                                |
| 5  | 4.5.4§ — اضافة                    | Master Data mutation allowlist.                                                                                                                                   |
| 6  | 4.5.5§ — اضافة                    | GENERAL_MANAGER exclusions.                                                                                                                                       |
| 7  | current output §6.16 — تعارض اتحل | PC-IC warning alone is nonblocking; an incomplete count integrity condition remains a blocker. Number requires renumbering review against consolidated Chapter 6. |
| 8  | 3.9§ — اضافة                      | Unified mandatory Send Back target list.                                                                                                                          |
| 9  | موجود مسبقاً                      | Posted business outcome and status consistency governed by §§2.2–2.3; merged text adds explicit implementation-facing integrity wording.                          |
| 10 | 6.21§ — تعارض اتحل                | UTC internal persistence retained; tenant timezone defines business EOD.                                                                                          |
| 11 | موجود مسبقاً                      | Approved Chapter 10 integer-quantity rule; the merged DOCX carries it as §10.5 because v2.0 source had not consolidated it.                                       |
| 12 | موجود مسبقاً                      | No page-level horizontal scrolling except internal grids; broader registry rule exists in consolidated Chapter 30.                                                |
| 13 | 23.8§ — اضافة                     | Location-constrained item lookup.                                                                                                                                 |
| 14 | 32.2§ — اضافة                     | Process Return restricted to the three governed roles.                                                                                                            |
| 15 | 32.3§ — اضافة                     | Force Close remains a protected service capability without enabled interactive action.                                                                            |
| 16 | 32.4§ — اضافة                     | Damaged/Lost dispositions follow BRK/LST governance.                                                                                                              |
| 17 | 32.5§ — اضافة                     | Immediate Good-return posting.                                                                                                                                    |
| 18 | 32.6§ — اضافة                     | Three-way quantity split and outstanding limit.                                                                                                                   |
| 19 | 32.7§ — اضافة                     | Optional Damaged-only photos.                                                                                                                                     |
| 20 | 32.8§ — اضافة                     | Dynamic Process Return / Returned behavior.                                                                                                                       |
| 21 | 15.7§ — اضافة                     | Original-note preservation.                                                                                                                                       |
| 22 | موجود مسبقاً                      | Every workflow action must create an auditable chronological event under §§22.2–22.3.                                                                             |
| 23 | 32.9§ — اضافة                     | Complete inter-hotel lifecycle.                                                                                                                                   |
| 24 | 32.10§ — اضافة                    | Ordinary Process Return prohibited for inter-hotel passes.                                                                                                        |
| 25 | موجود مسبقاً                      | Approved Chapter 10 WAC rule; merged DOCX carries it as §10.4.                                                                                                    |
| 26 | موجود مسبقاً                      | Posting Date determines the assigned period under Chapter 6.                                                                                                      |
| 27 | موجود مسبقاً                      | Approved Period Registry governance prohibits implicit open; merged DOCX repeats it as current §6.17, whose number requires consolidation review.                 |
| 28 | موجود مسبقاً                      | Approved close lifecycle creates the snapshot only on successful close; merged DOCX repeats it as current §6.18.                                                  |
| 29 | current output §6.19 — اضافة      | Closing snapshot as next opening reference. Current number collides with consolidated §6.19 Out of Scope and requires renumbering.                                |
| 30 | 6.20§ — اضافة                     | Close neither validates nor creates the following period.                                                                                                         |
| 31 | 6.22§ — تعارض اتحل وظيفياً        | Granular close authority adopted; PERIOD_CLOSE_MANAGE is temporary compatibility. Exact permission-key wording remains pending the §4.4 scope decision.           |
| 32 | 6.22§ — تعارض اتحل وظيفياً        | Granular reopen authority plus reason adopted; exact permission-key wording remains pending the §4.4 scope decision.                                              |
| 33 | 6.23§ — اضافة                     | Governed seven-step monthly sequence.                                                                                                                             |

| #  | Merge status | Decision / evidence                                                                                     |
|----|--------------|---------------------------------------------------------------------------------------------------------|
| 34 | موجود مسبقاً | Accepted inventory-truth decision confirms live Current Stock Balance; merged DOCX carries it as §33.1. |

## Numbering review note

- The original v2.0 FINAL DOCX ends Chapter 6 at §6.9 and ends the chapter sequence at Chapter 29.
- The consolidated governance source scripts/constitution-base.md later contains approved Chapter 6 clauses §6.10–§6.19 and Chapter 30 — Unified Visual Language.
- Therefore current merged §6.16–§6.19 collide with the consolidated Chapter 6 numbering and were not safely reserved numbers.
- Chapter 31 has no documented reservation in the inspected governance sources; the jump to Chapter 32 is a merge-numbering gap.
