

DX OSE Compliance Matrix v1

Constitution v2.1 target governance versus effective system reality — documentation only

Status legend: Compliant Partial / governance gap Non-compliant Transitional

Scope: Seven material gaps identified during the live ACC/runtime and constitution review. No system change is performed by this report.

#	Constitution clause	Status	Actual gap	Evidence reference
1	§4.5.1 — ADMIN Retirement	Non-compliant	ADMIN is constitutionally targeted for retirement but remains active, assignable through branch-tenant creation logic, and receives effective legacy-fallback permissions.	Role ADMIN; role-codes.constants.js; tenant.service.js; live tenant_members / ur_user_assignments / role_permissions
2	§4.5.2 and §4.5.5 — GENERAL_MANAGER Provisioning / Exclusions	Non-compliant	GENERAL_MANAGER has a limited live grant set and does not yet receive the full operational ACC grant set defined by the target constitution.	Role GENERAL_MANAGER; live ur_role_permissions; permissions include REPORTS_VIEW, workflow approvals and selected audit/Get Pass rights only
3	§32.2 — Process Return Authority	Non-compliant	The target rule restricts Process Return to ORG_MANAGER, FINANCE_MANAGER and SECURITY, while COST_CONTROL also has the live return permission.	GET_PASS_APPROVE_RETURN; role COST_CONTROL; live ur_role_permissions
4	§6.22 — Granular Close and Reopen Authority	Transitional	Granular permissions are the target, but the current API still accepts the legacy PERIOD_CLOSE_MANAGE bundle; navigation and API authorization are not fully aligned.	PERIOD_CLOSE_EXECUTE; PERIOD_REOPEN_EXECUTE; PERIOD_CLOSE_MANAGE; periodClose.routes.js
5	§4.5 Role Catalog Governance	Governance gap	RECEIVER and three E2E roles are active in the live environment but absent from the canonical role catalog. They have active assignments/memberships.	RECEIVER; E2E_ROLE_A_1783042125830-169d38; E2E_ROLE_B_1783042125830-169d38; E2E_VIEW_ONLY_1783042125830-169d38
6	§15.7 — Original Note Preservation	Non-compliant	At least one inter-hotel return path appends Manager Acceptance Notes to the original Get Pass notes field, contrary to separate-channel preservation.	getPass.service.js; acceptReturnIntoDepartment; notes / managerNotes
7	§4.4 ACC Scope and Permission Catalog	Governance gap	Live legacy/test permissions exist outside the current structured catalog, and several middleware aliases change the apparent permission meaning.	ASSET_*, ISSUE_*, REQUISITION_*, E2E_OTHER_1783042125830-169d38; authorize.js aliases

Conclusion: The constitution is a target-governance document. The User Rights file is a live-runtime snapshot. The system is not fully constitution-conformant until the seven gaps above are resolved or formally waived.
